Course Outcomes – After this project the students will be able to

CO1: Apply all theoretical concepts learned in research methodology

CO2: Articulate a clear research objective with accurate scope and limitations of the study

CO3: Identify an appropriate sample size for a study

CO4: Choose the appropriate data collection tools for accurate, authentic and complete data collection

CO5: Study the data using techniques appropriate to the Research Design

CO6: Analyze data using parametric techniques and conduct Univariate analysis.

CO7: Draw conclusions based on the results from the analysis

Guidelines

Students must be advised to select an area for research as per their interest. The area must be related to any subject or topic that has been discussed in any course in the class.

In case the student is interested in an entirely new area, there should be adequate reasoning and study to support the interest and the topic must be submitted to the HOD for approval before the research is commenced. Students and supervisors must ensure that they have access to reliable resources for data needed for research.

There shall be a supervisor for the students who will guide them to

- (i) select a topic from the area of economics, commerce and business,
- (ii) design the research project,
- (iii) collect and analyze data and
- (iv) write the report.

The number of Students to be allotted against one supervisor and the selection of the examiner for the project report will be determined as per the norms decided by the University.

Students must conduct preliminary research after a detailed survey and analysis of the existing literature on the topic and identify research gap to showcase the significance of the chosen topic. Students must decide their research topic and draft a clearly defined and delineated research objective.

Draft the research question for the research: Investigate the relationship between variables and establish causal relationships if any

Research methodology - Research can be experimental, observational, theoretical, textual, qualitative, quantitative, etc. Students may need to modify their research methodology in the light of the initial research through a pilot study

Analysis/data processing will include statistical analysis, generating graphs, charts or tables, organizing information into discrete categories, and so on, or it might involve historiographic or critical analysis of texts or events.

Writing up- This is the process of presenting the results of the research in a systematic manner. The Report must be in the given format to include Research Objective, Research Design, Data Collection, Data Analysis, Conclusions and Summary.

For the viva-voce examination, an expert shall be engaged who shall be a senior teacher from a college other than the college in which the student is studying.
